As a novel energy storage technology, flow batteries have received growing attentions due to their safety, sustainability, long-life circles and excellent stability. All vanadium redox flow battery (VRFB) is a promising candidate, especially it is the most mature flow battery at the current stage [5]. Fig. 1 shows the working principle of VRFB ...

The trend of increasing energy production from renewable sources has awakened great interest in the use of Vanadium Redox Flow Batteries (VRFB) in large-scale energy storage. The VRFB correspond to an emerging technology, in continuous improvement with many potential applications.

All-vanadium redox flow battery is a battery that can be used as a large-capacity energy storage power station. Its working principle is as follows: All-vanadium redox flow battery uses vanadium ion solutions with different valence states as active materials for positive and negative electrodes, respectively, and stores them separately. in their respective electrolyte storage tanks.

"A lot of the principles learned with vanadium can be translated to other systems," she says. She believes that
