Principles for cloud-native architecture The principle of architecting for the cloud, a.k.a. cloud-native architecture, focuses on how to optimize system architectures for the unique capabilities of the cloud. Traditional architecture tends to optimize for a fixed, high-cost infrastructure, which requires considerable manual effort to modify.

Backend platforms (servers, storage) Cloud-based delivery and a network (Internet, Intranet, Intercloud) Front end(fat client, thin client): The front end is a notion in cloud computing architecture that refers to how customers and users interact with cloud services. The front end has two basic categories: "Fat Client" and "Thin Client."
