Bay windows are composed of three windows that come together to form a single complete unit. The middle window is often a fixed, picture window that allows for a wide, unobstructed view. The windows on either side are typically double-hung or casement style windows that can be opened and closed for ventilation.

Bay windows are a type of window structure that projects outward from the main wall of a building, creating an alcove that can be used for various purposes, including seating and storage. These windows typically consist of three or more panels, with the center panel being larger and parallel to the wall, while the side panels are angled to ...

The most common styles include angled bay windows, box bay windows, and bow bay windows. Angled bays have a flat front and side panels that angle back towards the wall at 30 or 45 degrees. Box bays are square-shaped with three sides that project outwards from the house in a rectangular shape.

Thank you for your inquiry. Jeld-Wen doesn't offer a bay/bow window with marble seatboard. If you have further questions, please contact our HD customer service department at 1-800-466-3337, call any day between 6 a.m. and 2 a.m. EST, they can either answer your question or transfer you to your local store to answer your specific question.

Bow windows are typically created using four or five similarly-sized windows whereas bay windows use a larger window in the center of two flanking windows. Bow windows work best in exterior walls or corners with 80 inches or more of space, making them more flexible to fit large sizes than their bay counterparts.
