

Belize lifted weight storage

When electricity demand is high, the weights descend by the force of gravity and potential energy converts back into electricity (Fig. 1). A specific GES configuration that uses pulley systems working in tandem with a motor-generator to move the weights is known as lifted weight storage (LWS).

But for large energy storage the weight and height have to be huge. Here are some formulas: 1watt = 1joule/second ... This allows you to "charge" the system with a smaller amount of available energy, since lifting a 100 kg weight is less work/energy than lifting a 10,000 kg weight. The available "spare" power could potentially be smaller power ...
