

How do you store a bladder?

Storage conditions consist of the bladder being heat sealed in a 5 mil minimum black polyethylene bag or a 3 mil minimum U.V. resistant bag. It should then be placed in a cool dry place away from direct sun, ultraviolet & fluorescent lights, as well as ozone producing electrical equipment (ie. Fans or motors).

What temperature can a pressure retaining bladder be supplied with?

Bladders are compatible with most industrial fluids and can be furnished with temperature ranges from -40[°]C to 121[°]C (-40[°]F to 250[°]F). All pressure retaining components have materials that are traceable per an EN 10204 Type 3.2 certificate.

What temperature should a bladder be stored?

Storage temperature should be between 50[°]F and 90[°]F (10[°]C - 32[°]C). To monitor how long a bladder is kept in storage, the manufacturing date code can be used. The date code can be found on the bladder stem marked: mm/dd/yy. Prior to recycling, the accumulator must be made inoperable by drilling through its cylindrical shell.

Why should you buy a Parker bladder accumulator?

Parker bladder accumulator customers benefit from the following: Top and bottom repairable designs permit easy checking and maintenance of the bladder without removing the accumulator from the system, saving time and money.

How do you extend the life of a bladder?

Extended life can be achieved by having the bladder charged with 1-4 PSIG of nitrogen to its full size. (See Figure 22.) Heat seal bladder in a 5 mil minimum black polyethylene bag or a 3 mil minimum U.V. resistant bag. The air in the plastic bag should be purged using nitrogen prior to sealing.

Do bladder accumulators need a safety block?

According to the Pressure Equipment Directive 2014/68/EU (formerly 97/23/EC), bladder accumulators must be secured with a safety block which ensures all hydraulic fluid is discharged once the system is turned off. See Parker's Catalog HY10-1630 for more information on Safety Blocks. The accumulators should be installed in a clean environment.
