

What is the largest battery energy storage system in Bulgaria?

The system is the largest in Bulgaria. Image: Renalfa IPP. A 25MW/55MWh battery energy storage system (BESS) has been commissioned in Bulgaria, Eastern Europe, by operator Renalfa IPP, using technology provided by Chinese firms Hithium and Kehua.

Why do we need energy storage solutions in Bulgaria?

Establish a reliable energy system with greater share of intermittent generation. In the context of Bulgaria's energy landscape, energy storage solutions present a diverse array of benefits to various stakeholders stemming from its unique ability to time-shift energy and rapidly respond when called upon. The applic

What is a Bulgarian energy storage grant?

Following a three-month delay, the Ministry of Energy of Bulgaria combined five planned procedures for grants for energy storage facilities into three and launched calls for two of them. The aim is to support the buildout of renewable electricity plants, with which the subsidized systems would be integrated into hybrid power plants.

What are Bulgaria's energy storage subsidies?

The subsidies are for battery systems required to be installed together with renewable electricity plants of at least 200 kW in capacity. Following a three-month delay, the Ministry of Energy of Bulgaria combined five planned procedures for grants for energy storage facilities into three and launched calls for two of them.

Can battery-based energy storage improve peaking capacity in Bulgaria?

Storage can also offer greater flexibility and efficiency in managing the grid. Furthermore, and although hydropower storage already makes up a significant source of peaking capacity in Bulgaria, battery-based energy storage can address peaking needs during times of droughts, meet requirements for more distributed peaking po

Where does Bulgaria get its electricity from?

It came from thermal power stations, and only 7 percent from solar and wind¹. Historically, Bulgaria has also been a major producer and exporter of electricity for the surrounding region with a total of 10 interconnectors spread across Romania, Serbia, North Macedonia, Greece, and Turkey. The country thus has a critical role in driving a more s

Bulgaria already held the first two tenders for battery energy storage systems (BESS) that would be integrated with renewable electricity plants. Bulgaria gives special focus to energy storage. Earlier this month, Renalfa IPP has started the commercial operation of its first utility-scale battery energy storage system. The 25 MW - 55 MWh ...

Bulgaria energy storage

Under the new rules, investors in battery energy storage projects in Bulgaria will have to pay a deposit or provide a bank guarantee of BGN 50,000 (\$28,400) per MWh of capacity planned to be connected to the transmission or distribution networks.

Reports now indicate a 35 GW pipeline of solar and wind projects requesting connection to Bulgaria's grid³, while according to data by the Association for Production, Storage, and Trading of Electricity (APSTE), over the last three-years Bulgaria has practically doubled its PV-installed capacity to 2.2 GW with another 700 MW expected to ...

All energy storage options will be considered, not only batteries, the Bulgarian energy ministry said in a press release. Two agreements were signed on the matter by Bulgarian caretaker energy minister Rossen Hristov and EBRD's first vice-president Juergen Riegerink at a ceremony in Sofia.

The two tenders, launched under Bulgaria's national and resilience plan, aim to help 1,425 MW of new renewable energy generation capacity with 350 MW of energy storage join the grid. Funding support is offered only for the storage component.

Hithium has launched a 55 megawatt hours (MWh) battery energy storage system (BESS) project in Razlog, southwestern Bulgaria. The project, the largest in Eastern Europe, has been realised by Solarpro, a company specialising in energy generation and storage solutions across Europe.

In the context of Bulgaria's energy landscape, energy storage solutions present a diverse array of benefits to various stakeholders stemming from its unique ability to time-shift energy and ...

Bulgaria has launched its 3GWh energy storage tender, with the deadline to submit bids set on 21 November and around BGN 1.2bn (EUR613mn) of support up for grabs, it said, cited by RenewablesNow. The selected projects must be commissioned by March 2026. The funding cap for a single proposal is BGN 148...

AES is the world leader in lithium-ion-based energy storage, both through our business project and joint venture, Fluence. We pioneered the technology over one decade ago, and today almost half our new projects include a storage component. Energy storage is a "force multiplier" for carbon-free energy.

July 9th, Bulgaria - Stationary battery manufacturer Hithium has successfully deployed the largest battery energy storage system (BESS) project in Eastern Europe to date, with a capacity of 55MWh. This solar plus storage project was realized completely by EPC company Solarpro, in Razlog, Southwestern Bulgaria, where the project is located.. The new facility officially went ...

The Bulgaria's Ministry of Energy began accepting applications yesterday (21 August) in tenders for 3,000MWh of energy storage capacity. Called the National infrastructure for the storage of electricity from renewable ...

Bulgaria energy storage

The storage facilities and their integration into the national power system, given the variability of such energy sources, will benefit the further development of the renewables sector. Energy storage is a crucial step for the ...

Under the new rules, investors in battery energy storage projects in Bulgaria will have to pay a deposit or provide a bank guarantee of BGN 50,000 (\$28,400) per MWh of capacity planned to be connected to the ...

Bulgaria earmarked EUR 589 million for the endeavor, funded under the European Union's Recovery and Resilience Facility. The Ministry of Energy in Sofia plans to launch a tender on September 2 for standalone ...

Bulgaria to develop electricity storage to enhance development of renewables sector ... Energy storage is a crucial step for the low-carbon economy since storage enhances the security of supply and the development of the capacity for renewables. Moreover, the storage may be used as a tool to tackle the fluctuations in both price and consumption ...

4 i. Policy measures to achieve the national contribution to the binding 2030 Union target for renewable energy and trajectories as referred to in point (a)(2) of Article 4, and, where applicable or
