

Where does solar energy come from in Syria?

The use of solar energy spreads from northwestern Syria, which started relying on solar power around 2016, passing through areas in the north-east, ending with the areas under the control of the Syrian regime, which directed a clear trend to generate electricity through them, not only in large industrial facilities but even in homes.

Why are Syrians using solar panels?

Cut off from the power grid and with fuel costs soaring, Syrians in a poor, embattled enclave have turned en masse to solar panels to charge their phones and light their homes and tents. Solar panels covering rooftops, some of which have been damaged in government attacks, in Binnish, Syria.

Are solar panels a viable alternative energy source in Syria?

As an option that seemed to be one of the best alternative energy sources in Syria, reinforced by the absence of fuel, the spread of solar panels began in most regions, respectively, years ago, amid "government" support and adoption of this trend.

Is Syria a good country for solar energy?

Regarding wind energy, which is the second source of energy, Syria is not considered one of the countries that have a sufficient amount of wind throughout the year to produce electricity, and therefore the solar energy situation is regarded as the best in it.

Are solar panels a better option than losing electricity in Syria?

According to an opinion poll conducted by Enab Baladi, a number of Syrians residing in various governorates considered that alternative energy through solar panels is a better option than losing electricity despite its high costs and regardless of the controlling parties.

How much does a solar system cost in Syria?

The cost of solar systems for most domestic uses, outside the framework of production projects, ranges between 4 million and 14 million Syrian pounds, according to what Enab Baladi monitored from the websites of companies that install power systems in regime-controlled areas.

Community initiatives like Khirais' solar panel tap into Syria's high potential for solar energy, enabling people to shift away from fossil fuels, which will reduce emissions, provide decentralised energy, reduce air pollution and enable vulnerable communities to deploy cost-effective energy solutions.

Committed to transforming the electricity landscape and increasing the adoption of renewable energy in Syria, the government is aiming to have 10% of electricity generated from solar power by 2030. The Syrian Ministry of Electricity is currently managing the construction of a 100kW solar power plant in the town of Sargaya,

which is scheduled to ...

Close to the Turkish border, Al Kalamoun camp is part of Al Kammouneh - the largest site for displaced people in North-West Syria, opened in mid-2022. The site was built to ...

Large solar arrays offer one of the best ways to restore power to Syrian cities like Aleppo. Cheap to manufacture, quick to assemble and with low running costs, dispersed solar generation systems would also add resilience to an energy system that has been severely damaged by war and will remain at risk of violent attack.

Locals value the solar panels in Syria despite a high initial investment cost. In interviews with The New York Times, many locals described the panels as "god-sent." After the initial investment, solar panels are a virtually cost-free source of electricity. Thousands of locals now use solar panels to power their lights and electronics.

Cut off from the power grid and with fuel costs soaring, Syrians in a poor, embattled enclave have turned en masse to solar panels to charge their phones and light their homes and tents.

Close to the Turkish border, Al Kalamoun camp is part of Al Kammouneh - the largest site for displaced people in North-West Syria, opened in mid-2022. The site was built to house people displaced by the Syrian conflict and living in informal settlements around the area and, after 2023, also people who lost their houses in the earthquake.

KILLI, Syria: Huge solar panels poke out of pumpkin and tomato fields in Syria's rebel-held northwest, where after infrastructure was destroyed during a decade of war, many have switched to renewable energy.

Delve into the potential of solar energy in Syria and its ability to revolutionize the country's power sector. Explore the benefits of harnessing solar power, including energy independence, reduced reliance on fossil fuels, and a cleaner and greener future for Syria.
