

What is the energy sector in Cape Verde?

Cape Verde energy sector is strongly characterized by consumption of fossil fuels (derived oil-primary imported oil), biomass (wood) and use of renewable energy particularly wind and solar power.

Does Cape Verde have solar power?

In 2012 Cape Verde had an installed electricity generation capacity of around 300 MW, of which about 24% from wind power plants and 3% from photovoltaic stations. While solar power has an enormous potential as a source of renewable energy, natural conditions in Cape Verde are one of the best in the world for the production on wind energy.

What is the most economical renewable resource in Cape Verde?

According to the 2011 Cape Verde Energy Plan, the most economical renewable resource is wind power, with a cost of energy production less than half the cost of fuel oil (EUR 50/MWh vs. EUR 131/MWh). The generation from the solar photovoltaic resource carries a higher cost, since investment is estimated at EUR 3.25/Wp.

Is Cape Verde a viable alternative to fossil fuels?

Solid waste can also represent an adequate option while ocean and geothermic energy are being tested, with uncertainties remaining as to their efficiency. Cape Verde has an estimated potential of 2,600 MW of renewable energy, and more than 650 MW have been studied in concrete projects, which have lower production costs than fossil fuels.

Can Cape Verde use alternative energy?

The Government of Cape Verde has defined, in its program for the IX Legislature, the use, as far as is technically and economically possible, of alternative energies, particularly renewable and clean energies.

How does electricity work in Cape Verde?

Production and distribution of electricity in Cape Verde The generation and distribution of electricity in Cape Verde is basically guaranteed by Electra, SA, which covers all the islands, with the exception of Boa Vista, where electrical production and distribution is ensured by the Agência Energia da Boa Vista (AEB).

In this regard, we intend to provide a brief overview behind the offer and the demand of energy in Cape Verde, particularly in terms of production, distribution, losses and consumption of fossil fuel.

Cape Verde: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Cabo Verde matter energy

Cape Verde has an estimated potential of 2,600 MW of renew-able energy, and more than 650 MW have been studied in concrete projects, which have lower production costs than fossil fuels.

Cabo Verde Biofuels Production and Consumption, Cabo Verde Electricity Installed Capacity (Million Kilowatts), Cabo Verde Primary Energy Production (Quadrillion Btu), Cabo Verde Electricity Net Generation (Billion KWh), Cabo Verde CO2 Emissions from Energy Consumption 1980-2011, Cabo Verde Crude Oil and Petroleum Products Import and Export ...

Though Cabo Verde has ample sunshine and a sustainable offering of reliable wind resources, it has yet to meet its energy targets. It tries to promote renewable energy resources to diversify its energy mix and lower its dependence on other ...

Sustainable Development Goal 7: Energy Indicators (2016) Renewable energy (% of TFEC) 25.2 Access to electricity (% of population) 90.6 Energy efficiency (MJ per \$1 of GDP) 2.9 Access to clean cooking (% of population) 75
