Arguments like cycle life, high energy density, high efficiency, low level of self-discharge as well as low maintenance cost are usually asserted as the fundamental reasons for adoption of the lithium-ion batteries not only in the EVs but practically as the industrial standard for electric storage [8]. However fairly complicated system for temperature [9, 10], ...

Breakthroughs in energy storage devices are poised to usher in a new era of revolution in the energy landscape [15, 16].Central to this transformation, battery units assume an indispensable role as the primary energy storage elements [17, 18].Serving as the conduit between energy generation and utilization, they store energy as chemical energy and release ...

response for more than a decade. They are now also consolidating around mobile energy storage (i.e., electric vehicles), stationary energy storage, microgrids, and other parts of the grid. In the solar market, consumers are becoming "prosumers"--both producing and consuming electricity, facilitated by the fall in the cost of solar panels.
