

What is energy storage cloud?

In the CES model, energy storage resources are put into a sharing pool, which can be called an "energy storage cloud". Under this situation, energy storage resources and energy storage services will present "cloud" features to users, which include aggregation, collaboration, virtualization, and so on.

What is a cloud energy storage integrated service platform?

The cloud energy storage integrated service platform is a cloud energy storage ecosystem built based on battery energy storage, combined with advanced technologies such as the Internet of Things, 5G, big data, cloud services and blockchain.

How a cloud energy storage platform works?

The platform side needs to sort out the total supply of power and total demand power information for each time period and release the information. In the bidding and scheduling matching phase, the cloud energy storage platform conducts centralized bidding based on the quotations of small energy storage devices.

Can cloud energy storage reduce operating costs?

Therefore, the optimal allocation of small energy storage resources and the reduction of operating costs are urgent problems to be solved. In this study, the author introduced the concept of cloud energy storage and proposed a system architecture and operational model based on the deployment characteristics of user-side energy storage devices.

What happens when Ces users charge their cloud storage?

When a CES user charges its cloud storage, the energy storage facility charges by absorbing energy from the grid. When CES users discharge their cloud storage for their own use, the energy storage facility releases the energy to the grid to compensate for the corresponding load of the CES users.

What is cloud energy storage integrated management?

Through the cloud energy storage management system, the joint scheduling of multiple energy storage devices is realized, and the optimal allocation of electric energy is realized. The overall framework of cloud energy storage integrated management services is shown in Fig. 1.
