

At present, regardless of HEVs or BEVs, lithium-ion batteries are used as electrical energy storage devices. With the popularity of electric vehicles, lithium-ion batteries have the potential for major energy storage in off-grid renewable energy [38]. The charging of EVs will have a significant impact on the power grid.

Therefore, it is verified that the FTDO-CNTSMC control scheme is feasible and effective for the finite-time voltage tracking control of energy storage inverters with mismatched disturbances. 5 CONCLUSIONS. This paper has presented a solution to the finite-time voltage tracking control problem of energy storage inverters.

Parallel connection is one of the effective ways to expand the capacity of the inverter. However, there are many problems such as current unevenness in the inverter cascade system, ...
