

Compressed air energy storage (CAES) is one of the important means to solve the instability of power generation in renewable energy systems. To further improve the output power of the CAES system and the stability of the double-chamber liquid piston expansion module (LPEM) a new CAES coupled with liquid piston energy storage and release (LPSR-CAES) is proposed.

Oil and gas gathering and transportation pipelines are widely used in oil field production, and the safe and stable transportation of pipelines plays a crucial role in energy saving operation management of oil fields [1], [2], [3]. Since most crude oil produced in China is of high wax content and its fluidity is poor, so effective insulation measures are the main means ...

The cooling capacity of the liquid-type cooling technique is higher than the air-type cooling method, and accordingly, the liquid cooling system is designed in a more compact structure. Regarding the air-based cooling system, as it is seen in Fig. 3 (a), a parallel U-type air cooling thermal management system is considered.

Large-scale energy storage systems should be integrated to improve the utilization of power from the intermittent ocean energy sources [2]. Ocean compressed air energy storage (OCAES) is a promising utility-size energy storage system for ocean energy resources [3]. A schematic of the OCAES system is shown in Fig. 1. In OCAES, energy is stored ...

The liquid cooling system efficiently lowers both the overall temperature and the non-uniform temperature distribution of the battery module. This heat dissipation capability is influenced by factors such as the arrangement of the liquid cooling plate, flow channel geometry, coolant inlet and outlet placement, coolant type, mass flow rate, and coolant flow direction and ...
