How Kaco New Energy uses combiner boxes?

KACO new energy uses combiner boxes to support you with very flexible system design. First and foremost, DC combiners enable the "Virtual Central" concept: In ground-mounted solar power plants, the inverters are installed at a central location, while the DC combiners are spread across the PV module array.

What is a PV AC combiner box?

The new PV AC Combiner boxes have been designed for PV systems with string inverters in trackers or fix tilt systems. The product portfolio is suitable for inverters from 60 kW up to 200 kW and support voltages of 400 V, 690 V or 800 V AC. The combiner boxes allow to collect from 2 up to 6 string inverters in one single cabinet.

What is a solar combiner box?

Even though a solar combiner box is compact and straightforward, it has numerous advantages for the solar system. They maintain orderly wires to reduce energy loss from the panels to the inverter. The solar combiner box makes it simple to detach when repairs are needed and to reconnect after the necessary maintenance has been completed.

Is a solar combiner box a good investment?

Even though it could appear like a costly investment, it is essential for large solar systems and can still be useful for smaller solar systems. The gain in energy efficiency you will notice from a solar combiner box will enable you to quickly recoup its cost.

How does a combiner box work?

The output of several solar strings is combined by the combiner box. Each string conductor lands on a fuse terminal as the output of the fused inputs is combined onto a single wire that connects the box to the inverter. Although this is the most basic type of combiner box, it usually has extra features once it is installed in your solar project.

How many string inverters can be stored in a combiner box?

Additionally, it is simple to isolate each string inverter from the system for maintenance purposes. The combiner boxes allow you to store anywhere between two and six-string inverters in a single cabinet. They work in the harshest climate conditions and meet the highest market standards according to IEC 61439-2 ed 3.0:2020.
