

Could gas-to-power help Equatorial Guinea develop a regional power economy?

For Equatorial Guinea, which enjoys a strategic position in the Gulf of Guinea, gas-to-power offers the potential to anchor the development of a regional power economy. Given its current energy output and relatively small population of 1.4 million, the country has been able to meet domestic energy demand with self-produced power to date.

Is gas-fired power generation a viable solution for Equatorial Guinea?

As Equatorial Guinea emerges as a leader in regional gas monetization, gas-fired power generation represents an attractive solution to fulfilling national electrification objectives, while meeting global decarbonization demands.

How much energy does Equatorial Guinea use?

Electricity consumption in Equatorial Guinea in 2015 was 36 kilotonnes of oil equivalent (ktoe). The country produces all of the energy it consumes. As of 2012, renewable energy accounted for 29.2% of the final energy mix.

What are the different types of energy transformation in Equatorial Guinea?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Equatorial Guinea for 2022. Another important form of transformation is the generation of electricity.

Is biomass a source of electricity in Equatorial Guinea?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Equatorial Guinea: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Why is energy in Equatorial Guinea declining?

Energy in Equatorial Guinea is an industry with plenty of potential, especially in the fields of oil and natural gas. However, production has been declining in recent years due to under-investment and lack of new discoveries. In 2022, the country produced less than 100,000 barrels of oil per day (bopd) according to OPEC data.
