

The project aims to investigate the potential of different energy storage technologies in Finland. These should be able to store electrical energy and use it to produce electricity, heat, or different

Energy Savings - Variable speed drive produces 15-25% annual energy savings, IPLV as high as 15.2 EER, and up to 0.25 kW/TR reduction in energy use when replacing existing chillers. Quiet Operation - Significant sound reduction at off-design conditions makes YCIV chillers are quieter than competitive chillers.
