

With an installed capacity of 100+ MW, equivalent to the annual electricity consumption of about 20,000 homes, it will be one of Finland's largest solar parks under development. According to the target plan, the solar park will begin construction in Q4 2024 and will be commissioned in Q1 2026.

The Finnish Energy Authority states that in 2022, solar power production amounted to nearly 635 megawatts - more than a 240 megawatt increase compared to the previous year. Finland still produces fairly little solar electricity compared to leading European countries. The Netherlands, in contrast, produce over seven times more per capita.

Solar panels in Helsinki. Solar energy in Finland is used primarily for water heating and by the use of photovoltaics to generate electricity. As a northern country, summer days are long and winter days are short. Above the Arctic Circle, the sun does not rise some days in winter, and does not set some days in the summer. Due to the low sun ...

The European Climate, Environment and Infrastructure Executive Agency (CINEA) has signed grant agreements with the winners of the EU's first cross-border renewables tender, awarding EUR 27.5 million (USD 29.8m) in funding for seven solar photovoltaic projects in ...

Swedish solar developer Alight AB has unveiled an expansion into Finland with a solar project of plus-100 MW, located in the municipality of Eurajoki in the southwestern part of the country. The company aims to start construction of the solar park in the final quarter of 2024 and to commission the facility in the first quarter of 2026.

Sun Energia Oy: Solar power calculations based on geographical information. Sundial Finland: Provider of a variety of solar thermal products and services: solar heating systems and components, engineering, consulting and training services. Synaptic Oy: PV components and systems for companies, domestic consumers and retailers. System plannings ...
