Are flow batteries a good choice for solar energy storage?

Flow batteries exhibit significant advantages over alternative battery technologies in several aspects, including storage duration, scalability and longevity, making them particularly well-suited for large-scale solar energy storage projects.

Where did flow batteries come from?

Actually, the development of flow batteries can be traced back to the 1970s when Lawrence Thaller at NASA created the first prototype of this battery type. Now flow batteries have evolved into a promising technology for certain solar energy storage applications. The schematic view of a flow battery |Source: ScienceDirect

What is a vanadium flow battery?

Vanadium flow batteries are ideal for powering homes with solar energy. Compared to lithium batteries, StorEn's residential vanadium batteries are: Homes with solar panels need batteries to store energy collected during peak sun times so it can be used later, when it's dark, overcast, or during inclement weather.

What is a flow battery?

It is where electrochemical reactions occur between two electrolytes, converting chemical energy into electrical energy. Unlike traditional rechargeable batteries, the electrolytes in a flow battery are not stored in the cell stack around the electrodes; rather, they are stored in exterior tanks separately.

Are flow batteries flammable?

Unlike some other types of batteries, flow batteries don't contain flammable electrolytes, which reduces the risk of fire or explosion. The design of flow battery storage systems allows for the storage tanks to be installed separately from the conducting cell membrane and power stack, further enhancing safety.

Are flow batteries a good choice for commercial applications?

But without question, there are some downsides that hinder their wide-scale commercial applications. Flow batteries exhibit superior discharge capability compared to traditional batteries, as they can be almost fully discharged without causing damage to the battery or reducing its lifespan.

Through StorEn's research and innovation, we have engineered a vanadium flow battery that is 30 percent smaller than other designs with similar energy. This development means that ...
