

What is French Polynesia's energy transition plan?

French Polynesia's energy transition plan has three main objectives: Change the energy model, by gradually replacing the use of fossil fuels with renewable energies in all activities

Does French Polynesia rely on hydrocarbons?

French Polynesia, like most island territories, is highly dependent on hydrocarbon imports. In 2019, 93.8% of energy consumed in the archipelagos came from imports of various petroleum-based fuels. The renewable energy penetration rate in power generation stood at 28.78% in 2019. This figure has remained stable over the last five years.

Is biomass a source of electricity in French Polynesia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. French Polynesia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Is Tahiti a good place for solar energy?

This product could then be used for other coastal areas of Tahiti. The annual energy output of a single PV module is 256.7 kWh, which corresponds to 7 % of the annual consumption of a typical household in Tahiti. The capacity factor reaches 22.5 %, which makes Faaa a good site for harnessing solar resource.

How much energy does a PV module produce in Tahiti?

The annual energy output of a single PV module is 256.7 kWh, which corresponds to 7 % of the annual consumption of a typical household in Tahiti. The capacity factor reaches 22.5 %, which makes Faaa a good site for harnessing solar resource. Monthly variations of GHI and k_t . Annual GHI in kWh/m²; retrieved from Global Solar Atlas.

Can a global solar atlas dataset be used in Tahiti?

The Global Solar Atlas satellite-derived dataset shows acceptable relative error when compared to Faaa in situ measurements. This product could then be used for other coastal areas of Tahiti. The annual energy output of a single PV module is 256.7 kWh, which corresponds to 7 % of the annual consumption of a typical household in Tahiti.

DSS awarded contract by the Johns Hopkins University Applied Physics Laboratory to provide ROSA solar arrays for NASA's DART Mission. Santa Barbara, California, April 20, 2018 - Deployable Space Systems, Inc. ...

Solar inverter manufacturer SMA will supply German grid operator TransnetBW with feed-in data from regional power installations to alleviate grid bottlenecking issues as home-consumption and ...

AFD and the Polynesian authorities have jointly defined a support program to assist French Polynesia with its energy transition. By 2030, the renewable energy penetration rate in power generation will reach about 75%.

Solar energy assessment and forecasting in insular regions: the Tahiti case study Guillaume Tremoy More information on the tahitian power grid and all of our forecasting services ...

A wet day is one with at least 0.04 inches of liquid or liquid-equivalent precipitation. The chance of wet days in French Polynesia varies significantly throughout the year. The wetter season lasts ...

The arrays use upgraded solar cells developed by Boeing's Spectrolab, enabling each iROSA solar array to provide more than 20 kilowatts of power at the beginning of life. This makes the iROSA arrays some of the most ...

Newrest is committed to the energy transition in French Polynesia. One of its flagship initiatives is the deployment of 420 solar panels on the island of Tahiti, and here we explore the details of ...
