

Grow more power system Paraguay

Does Paraguay need to expand its power system?

Also, we estimated the annual revenues for the government of Paraguay and Itaipu through its electricity exports to Brazil. We find that Paraguay needs to expand the capacity of its power system, mainly by investing in hydropower plants, to cover its future electricity needs and sustain national electricity export levels.

How is energy sourced in Paraguay?

Energy in Paraguay is primarily sourced from hydropower, with pivotal projects like the Itaipu Dam, one of the world's largest hydroelectric facilities. This reliance underscores the need for a robust infrastructure, including efficient transmission networks and distribution systems, to leverage the country's renewable resources fully.

Should Paraguay invest in hydropower plants?

We find that Paraguay will need to invest in hydropower plants, by mainly expanding the capacity of Yacyretá to cover its electricity needs and sustain national electricity exports levels.

Does Paraguay have hydro power?

[español]o [português]This page is part of Global Energy Monitor 's Latin America Energy Portal. In 2020, hydro power provided 100% of Paraguay's electricity and roughly half of the country's overall energy supply, with biofuels and imported oil accounting for the remainder.

How much electricity does Paraguay produce?

Paraguay generated 51.8 terawatt -hours of electricity in 2004, while consuming only 3.1 TWh. Almost all of the country's electricity production comes from a single facility, the bi-national Itaipu dam. Paraguay is one of the world's largest net exporters of electric power.

Who controls the electricity market in Paraguay?

The National Electricity Administration (Administración Nacional de Electricidad, ANDE), Paraguay's state-owned utility, controls the country's entire electricity market, including generation, transmission and distribution.

Paraguay operates two binational hydroelectric dams. Itaipu dam, by far the largest power station in the country, is operated with Brazil and has an installed capacity of 7000 MW (86 percent of Paraguay's generation capacity).

Paraguay could benefit from energy diversification by opening a solar farm. This would offer multiple economic and social advantages. First, it would create direct and indirect jobs during its construction, operation, and maintenance, benefiting local communities.

economic and social advantages. First, it would create direct and indirect ...

A new hydropower plant (130 MW) comes into the power system in the last years of the modeling period (2039-2040). In contrast, in the Medium and High demand scenarios, under the ISC.3 case, the installed capacity increases to 13.65 GW in 2040. The same new hydropower plant comes into the power system in earlier years (2027).

Paraguay offers great opportunities given its clean energy surplus to produce green hydrogen, reinforced by growing regional interest to create a green hydrogen hub. Paraguay's interest in developing a sustainable energy system, and mitigating risks related to climate change are particularly crucial, given its reliance on natural resources.
