

Guam rwt energy

How is energy consumed in Guam?

In Guam, the consumption of energy is heavily influenced by its remote location. Almost all energy is reliant on imports of petroleum products for use in transport and electricity. Guam does not have any domestic production of conventional fuels such as oil, natural gas, or coal.

Is Guam a renewable Island?

Guam's renewable portfolio standard requires that 50% of the island's electricity sales come from renewables by 2035 and 100% by 2040. Guam's utility plans to procure 180 megawatts of new renewable generating capacity by 2027. Last Updated: March 21, 2024 Guam imports petroleum products to meet almost all of its energy needs.

Does Guam use fossil energy?

3 Guam has no fossil energy resources and meets nearly all of its energy needs--including the fuel for generating most of its electricity--with imported petroleum products. 4,5 However, Guam is increasing its use of renewable energy resources for electricity generation. 6,7

How much power does Guam generate?

Guam has a rated generating capacity of 560 MW, more than twice its historical highest load. This power is supplied by several plants burning residual fuel oil operated for the Guam Power Authority by independent power providers. In 2015, electricity in Guam cost 2.5 times as much as on the U.S. mainland.

Does Guam have plans for a solar farm?

Guam has announced plans for several large solar farms. The island has adopted a renewables policy that requires the reduction of fossil fuel consumption by 2020 to 20% less than the rate in 2010. Another requirement is for 5% of electricity in 2015 to be from renewables, increasing to 25% by 2035. A net metering program began in 2009.

Does Guam have wind power?

Guam has substantial wind power potential but also has unique wind turbine siting issues. The island is seismically active and is in the Pacific's Typhoon Alley, so wind turbines must be engineered to withstand both earthquakes and typhoon-force winds.

The pattern of energy production and use in Guam is shaped by its location, a remote island. Almost all energy is reliant on imports of petroleum products for use in transport and electricity. Guam has no domestic production of conventional fuels such as oil, natural gas or coal. Its economy is dependent on the import of gasoline and jet fuel for transport and residual fuel oil for electricity. One third of electricity produced is used in commercial settings including the leading industry of touri...
