

How many batteries can a lithium-ion battery box store?

The cookie is set by the GDPR Cookie Consent plugin and is used to store whether or not user has consented to the use of cookies. It does not store any personal data. Lithium-ion battery boxes can store up to 3 lithium batteries UN 3480 of up to 814 Wh each. With fireproof lining and textured glass fibres.

Are lithium-ion batteries dangerous?

Due to the high risk of fire and explosion, lithium-ion batteries are considered dangerous goods under international transport law and are subject to the regulations for transporting dangerous goods. Yes, after the transport route, the rules apply to air freight, sea freight or road transport.

Why is a lithium battery safety system important?

It heavily depends on the multiple parameters, such as the capacity (Wh), the state of charge, the chemistry of the cell, the shape and size of the battery and the type of casing. For this reason it is very important that lithium battery safety systems are tested intensively, much more than other conventional industrial fire protection systems.

Can a lithium battery fire be predicted?

The behaviour of a lithium battery fire can never be predicted. It heavily depends on the multiple parameters, such as the capacity (Wh), the state of charge, the chemistry of the cell, the shape and size of the battery and the type of casing.

Can a battery be charged if stored inside a box?

It is possible to charge batteries while safely stored inside the box. This is done by using our LithiumSafe(TM) Cable Entry Plug. This is a 240 minute fire-resistant certified plug that prevents fire penetration via the charging cable in case of thermal runaway. The cable of a power distribution unit is fed through the Cable Entry Plug.

What happens if a lithium ion battery goes into thermal runaway?

When a lithium ion battery goes into thermal runaway, a high volume of highly flammable gas is produced. This gas must be vented to the outside to prevent the pressure inside the box from building up and causing it to explode. In our tests, we measured extremely high pressures in some cases, ranging from 1 to 5 bar.
