

# Kenya energy depot

Who is the Energy depot?

THE ENERGY DEPOT is a total energy solutions company offering advisory, design and cost-efficient turnkey LPG installation, and retrofit services for industrial, institutional and commercial energy consumers. We also provide efficiency enhancement services for existing biomass cooking and heating technologies.

Who is responsible for generating electricity in Kenya?

However, Kenya Electricity Generating Company (KenGen), is responsible for generating approximately 90% of installed capacity. Independent Power Producers (IPPs) are responsible for about 10% of installed capacity.

How much electricity does Kenya need?

Kenya's current effective installed (grid connected) electricity capacity is 2,651 megawatts (MW), with peak demand of 1,912 MW, as of November 2019. At that time, demand was rising at a calculated rate of 3.6 percent annually, given that peak demand was 1,770 MW, at the beginning of 2018.

Should Kenya move away from bioenergy?

In the AC, Kenya could supply an economy six-and half times larger than today using little more than twice its current energy consumption, if it were to move away from bioenergy and improve energy efficiency. Two-thirds of Kenya's energy currently comes from bioenergy.

How much energy will Kenya invest in 2040?

Energy investment amounts to around \$60 billion through to 2040 in the STEPS, with renewables and electricity networks accounting for half of this. Investments in renewables and electricity networks need to double in the AC. Kenya is on the cusp of reaching universal access to electricity.

Why has Kenya made significant progress in Deploying Renewables?

Kenya has made notable progress in deploying renewables in large part because it has successfully attracted the necessary private investment for renewables projects. Further development of these resources would help it meet demand growth. Kenya Energy Outlook - Analysis and findings.
