

Kenya waste sorting cabinets

How do you sort out waste for onward recycling?

Here we always try to sort out as much waste as possible for onward recycling. Using conveyor belts and other machineryour trained staff sort the incoming waste into more than 40 different waste fractions: paper,cardboard,plastic containers &packaging,styrofoam,glass,metal,aluminum,shoes,textiles and many more fractions.

What is a recycling plant in Kenya?

Our recycling plant is the only recycling plant in Kenya for single-use light plastic containers (i.e. yoghurt cups, fast-food trays). Our plants turn plastic products into flakes. We optionally can also turn the materials into new pellets. These are the steps:

How are waste fractions sorted?

Using conveyor belts and other machineryour trained staff sort the incoming waste into more than 40 different waste fractions: paper,cardboard,plastic containers &packaging,styrofoam,glass,metal,aluminum,shoes,textiles and many more fractions. Most of these materials are then compacted for easier storage and onward transport.

How does composting work in Kenya?

These are the steps: At our composting plant we process organic and garden waste into high quality compost,a natural soil amendment. The compost is then used by urban households and farmers across Kenya to improve their soil fertility. We process organic and garden waste into high quality compost.

How can we make Nairobi a cleaner and healthier city?

Commercial Together we can make Nairobi a cleaner and healthier city for all of us. We offer waste management services to all types of waste producers residential houses and apartments, office buildings, restaurants, schools, shopping malls, factories and hospitals.

Why is waste separation and sorting important?

Recyclingis the foundation of our waste management model. This is why waste separation and sorting are essential in what we do. Only when waste is sorted well and not overly contaminated can it be recycled. After collection we take the waste to one of our sorting plants.

The users sort their waste at home and dispose of them in the respective units. We want to make sorting easy to encourage recycling and thus, enable a circular economy for the future. Compared to traditional waste rooms or bins, our ...
