present, because the safety factor of metal hydride hydrogen storage is higher than that of liquid hydrogen storage, and the energy ...

As discussed in Section 3.2, although liquid hydrogen as a hydrogen storage technology in the value chain has so far shown to be almost the least cost effective, there are important opportunities for the liquid hydrogen storage technology in the hydrogen economy. Because of the high energy density, liquid hydrogen fuels have been studied and ...

The efficiency of energy storage by compressed hydrogen gas is about 94% (Leung et al., 2004). This efficiency can compare with the efficiency of battery storage around 75% (Chan, 2000; Linden, 1995). It is noted that increasing the hydrogen storage pressure increases the volumetric storage density ( $H_2$ -kg/m<sup>3</sup>), but the overall energy

Physical hydrogen storage (e.g., high-pressure compressed gas cylinders and cryogenic liquid tanks) has thus far been the main hydrogen storage technology used in prototype hydrogen-powered vehicles and is currently the most mature technology for use onboard vehicles. In order to enable widespread use in commercial vehicle

With the popularization and application of hydrogen fuel cell technology, hydrogen energy is expected to be widely used in the field of transportation; Hydrogen doped natural gas pipeline transportation is the inevitable development trend of large-scale and large-area regional radiation application of hydrogen energy, and the relevant ...

Hydrogen energy as a sustainable energy source has most recently become an increasingly important renewable energy resource due to its ability to power fuel cells in zero-emission vehicles and its ...

For this reason, hydrogen used for commercial aircraft is typically envisaged to be stored in a cryogenic liquid form. Given the low-temperature boiling point of hydrogen, at 20.28 K, the use of this energy storage medium as a cryogen is also a way to enable the use of superconducting electrical power transmission and propulsion systems.

The entire industry chain of hydrogen energy includes key links such as production, storage, transportation, and application. Among them, the cost of the storage and transportation link exceeds 30%, making it a crucial factor for the efficient and extensive application of hydrogen energy [3]. Therefore, the development of safe and economical ...

Recently, hydrogen ( $H_2$ ) has been identified as a renewable energy carrier/vector in a bid to tremendously reduce acute dependence on fossil fuels. Table 1 shows a comparative characteristic of  $H_2$  with conventional fuels and indicates the efficiency of a hydrogen economy. The term "Hydrogen economy" refers to a socio-economic system in ...
