How much do electric energy storage technologies cost?

Here, we construct experience curves to project future prices for 11 electrical energy storage technologies. We find that, regardless of technology, capital costs are on a trajectory towards US\$340 ± 60 kWh -1 for installed stationary systems and US\$175 ± 25 kWh -1 for battery packs once 1 TWh of capacity is installed for each technology.

Are there cost comparison sources for energy storage technologies?

There exist a number of cost comparison sources for energy storage technologiesFor example, work performed for Pacific Northwest National Laboratory provides cost and performance characteristics for several different battery energy storage (BES) technologies (Mongird et al. 2019).

How much does a storage energy capacity cost?

We estimate that cost-competitively meeting baseload demand 100% of the time requires storage energy capacity costs below \$20/kWh. If other sources meet demand 5% of the time, electricity costs fall and the energy capacity cost target rises to \$150/kWh.

What is the 2020 grid energy storage technologies cost and performance assessment?

Pacific Northwest National Laboratory's 2020 Grid Energy Storage Technologies Cost and Performance Assessment provides a range of cost estimates for technologies in 2020 and 2030 as well as a framework to help break down different cost categories of energy storage systems.

How much does a storage system cost?

The costs of energy from optimized systems are summarized in Figure 3 for two different storage technology cost structures, with power and energy capacity costs of \$1,000/kW and \$20/kWh (Tech I) and \$700/kW and \$150/kWh (Tech II).

How much does energy capacity cost?

Ranges of storage power capacity costs (\$0-\$2,000/kW) and energy capacity costs (\$0-\$300/kWh)were used as simulation inputs, in order to cover a variety of cost combinations for current and potential future technologies.

Some of the relevant studies in the open literature include Hussain et al., who conducted a study that presented a cost analysis of a 20 MW concentrated solar power plant with a thermal energy storage system in Bangladesh. However, none of these studies provide a comprehensive outlook on the energy generation costs associated with CSP plants.
