

NREL supported the development and acceptance testing of a microgrid battery energy storage system developed by EaglePicher Technologies as part of an effort sponsored by U.S. Northern Command. The three-tiered, 300-kW/386-kWh grid-tied system is capable of providing grid stabilization, microgrid support, and on-command power response.

A new concept called "Vehicle-to-Micro-Grid (V2mG) network" integrates off-grid building energy systems with flexible power storage/supply from battery EVs (BEVs) and fuel cell EVs (FCEVs) suggests that the degradation of LIBs in BEVs can be reduced by 13% compared to networks without FCEVs. ...
