

Monrovia subsidized energy storage project

Are California's battery energy storage systems going up?

For Immediate Release: October 24, 2023 SACRAMENTO -- New data show California is surging forward with the buildout of battery energy storage systems with more than 6,600 megawatts (MW) online, enough electricity to power 6.6 million homes for up to four hours.

What is the long duration energy storage program?

The Long Duration Energy Storage program will pave the way for opportunities to foster a diverse portfolio of energy storage technologies that will contribute to a safe and reliable future grid. This program plays an important role in achieving California's zero carbon goals.

How do energy storage projects work?

Energy storage projects capture power produced by wind and solar resources and discharge the energy back to the electric grid during times of peak demand. In California, electricity demand is highest in the late afternoon and early evening hours when the sun sets, causing solar resources to drop off before winds pick up later in the evening.

Monrovia, Oct 30, 2023 - In an unprecedented show of interest by the private sector, over 20 firms/consortiums/JVs are competing to set up grid connected solar PV and battery storage plants in three West African countries.
