A fully distributed control scheme of island microgrids that can perform the primary, secondary, and tertiary control locally in distributed generators (DGs) is proposed, with low-pass filters designed to decouple the dynamics of the microgrid and to improve the system performance.

A project in Jamaica, pairing utility-scale solar with battery energy storage at a microgrid could become "a model for other countries in the Caribbean and beyond", the head of the country's main utility has said.

ABB will supply an ABB Ability™ enabled microgrid and storage system to help integrate renewable solar and wind energy into the large tropical island's power supply, reducing the need for fossil fuels and lowering the carbon footprint.
