

Profile solar DR Congo

When will DR Congo's solar power plants be built?

The plants are to be built by the Moyi Power joint venture and are expected to be completed within 18 months after the start of construction. According to the latest figures from the International Renewable Energy Agency, DR Congo only had 20 MW of installed PV capacity at the end of 2020.

How much power does DR Congo have?

According to the latest figures from the International Renewable Energy Agency, DR Congo only had 20 MW of installed PV capacity at the end of 2020. The country has one of the lowest levels of access to electricity in the world, with only 9% of the population being supplied with power. This percentage in rural areas drops to as far as 1%.

Will a \$100 million solar project power Gemena & Bumba & Isiro?

An international consortium led by Powergrids plans to invest \$100 million in three off-grid solar plants intended to power the cities of Gemena, Bumba, and Isiro, which are located in the country's northern region and currently have no connection to the country's power network.

How much solar power is available in Kinshasa?

In the area around Kinshasa there is a further 6 GW of solar available at 7 US cents per kW hr. There is also sufficient for the rural areas around Kinshasa, Mbandaka on the Congo river and the main port of Matadi. It can even be exported over the river to Brazzaville.

How much power does DRC need?

Even with new solar and wind DRC could only satisfy between 15 and 55% of total demand. This leaves between 45% and 85% needing off-grid power or 16 GW of installed solar capacity! Same applies to clean water as only 23% have access.

Will the DRC benefit from the Inga?

Currently the DRC only has 2.5 GW installed and no early benefit from the Inga. However solar and wind is available now. Existing HEP could fill in the 'gaps' when solar is not available. However off-grid power is essential in the rural areas and small towns across this vast country.
