

What are the key energy policies to tackle change in Saudi Arabia?

Two key energy policies to tackle change are: energy efficiency and renewable energy. Within this context, this analysis intends to: (1) explore the ongoing energy transition in Saudi Arabia; (2) examine the role of renewable energy in achieving the sustainability goals in Saudi Arabia.

How much power does Saudi Arabia need?

Saudi Arabia has established a goal to source at least 50 percent of its power from renewable energy by 2030, expanding its capacity to 130 gigawatts (GW), 58.7 GW of which is expected to come from solar and 40 GW from wind. This target is the most ambitious of its kind among Gulf Cooperation Council (GCC) countries (Figure 1).

Is Saudi Arabia aiming for 60% renewable electricity by 2030?

Saudi Arabia is targeting 50% renewable electricity by 2030, while the IEA's Net Zero Emissions scenario sets out a global target of 60% renewable electricity by 2030. However, while it is planning one of the most rapid scale-ups of renewables globally, the path to implementation remains unclear.

Does Saudi Arabia have an energy efficiency program?

Figure 2: Saudi's energy transition journey. Source: Authors. One of the first energy efficiency initiatives in the KSA is the launch of the National Energy Efficiency Program in 2003 as a three-year program to improve the management and efficiency of electricity generation and consumption in the kingdom.

Does Saudi Arabia have nuclear power plants?

At present, Saudi Arabia has no nuclear power plants, but has plans to include atomic energy in its future energy mix and build domestic nuclear industry in anticipation to meeting rapid increase in energy demand across the industrial and residential sectors.

What is Saudi Arabia's Green Initiative & Middle East Green Initiative?

Saudi Arabia has introduced the Saudi Green Initiative and the Middle East Green Initiative to elevate the presence of renewable energy sources in the primary energy blend to 50% by the year 2030. In addition, the ambitious plan is to plant 40 billion trees. 4.

change and accelerating the needed energy transition, Saudi Arabia is driven by other socio-economic factors to developing alternative energy sources. Saudi Arabia's renewable ...

Saudi Arabia has established a goal to source at least 50 percent of its power from renewable energy by 2030, expanding its capacity to 130 gigawatts (GW), 58.7 GW of which is expected to come from solar and 40 ...

Saudi Arabia: Many of us want an overview of how much energy our country consumes, where it comes from,

## Saudi Arabia sia safe energy

and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

In a significant move towards sustainable aviation, Aramco, TotalEnergies, and the Saudi Investment Recycling Company (SIRC) have announced the signing of a Joint Development ...

Fossil fuel will continue to play a role in meeting future increasing energy demand. Two key energy policies to tackle change are: energy efficiency and renewable energy. Within this context, this analysis intends to: (1) explore the ...

Energy demand is increasing rapidly due to rapid growth and industrialization. It is becoming more and more complex to manage generation and distribution due to the diversification of energy ...
