The present work is aimed to investigate the linear regression model of total coliform (TC), faecal coliform (FC) and enterococci (ENT) responses in the storage system of sewage effluents at different temperatures (room temperature 25  $\pm$  2  $^{\circ}$ C, 55 and 65  $^{\circ}$ C). Five litres (v/v) of sewage effluent samples was stored at room temperature (25  $\pm$  2  $^{\circ}$ C) for 1, 2, 3 and 4 ...

I think you have the right idea. Inside the compartment adjacent to the sewer hose storage container, you will see the thin sheet metal "bulkhead" that separates the main storage compartment from the white plastic hose storage container. This is the metal you need to remove in order to remove the sewer storage container.

Accepting 3" drain hoses, it accepts the common "Rhino Flex" 15-foot sewage hose with all fittings. Keep in mind, though, that if you have the Rhino Flex 15 foot Extreme sewage hose, that it will require more than 60". Durable and long-lasting, it is the perfect thing to assist in making this task that much easier.

The sewage system is not smart enough to send excess sewage to a different plant -- it often seems to just send it to the closest one, similar to how many other things are handled in this game. Solution: spread out your plants a bit better, and/or make sure each individual plant has enough tanks to process incoming sewage.
