What does gridmarket do for Sint Maarten?

GridMarket was chosen as Sint Maarten's exclusive renewable energy partner to help the island reach 85% renewable penetration and 100% heavy fuel oil free by 2030. Sint Maarten will work with GridMarket to identify, design, procure, and install distributed energy assets and make corresponding infrastructure upgrades.

What is Microgrid technology?

Microgrid Technology: What Is It and How It Works? Generally, a microgrid is a set of distributed energy systems (DES) operating dependently or independently of a larger utility grid, providing flexible local power to improve reliability while leveraging renewable energy.

What are the components of a microgrid?

They can be used to power individual homes, small communities, or entire neighborhoods, and can be customized to meet specific energy requirements. Microgrids typically consist of four main components: energy generation, energy storage, loads and energy management. The architecture of microgrid is given in Figure 1.

What are microgrid options?

Microgrid options are driven by the global imperative to move quickly to renewable energy for power generation. They also allow facility owners to meet immediate practical needs. Improvements in microgrid technology mean that the possibilities for both large and small, connected, or remote microgrids are increasing.

What are the different types of microgrids?

There are two categories of microgrids, off-grid and grid-connected, and each encompass many different setups. Off-grid microgrids are constructed where there is a significant need for electricity but no access to a wide-area electrical grid. Islands that are too far from the mainland are typically served by their own microgrid.

What should be included in a microgrid configuration?

The microgrid configuration should be identified, including point (s) of interconnection with the utility grid and existing and future distributed energy resources (DERs) such as solar, wind, combined heat and power (CHP), fuel cells, and energy storage.

To sum up, St. Martin uses European-style 220-240V electricity and Type C/E plugs, while St. Maarten uses U.S.-style 110-120V electricity and Type A/B plugs. For those staying at one of the many luxury rental properties ...
