

The specific objective of this EIA is to provide the decision makers in Tokelau with an account of the environmental implications of the proposed PV project and identify, describe and recommend feasible mitigation measures for minimizing, eliminating or offsetting unavoidable adverse effects from the current, diesel based Tokelau Power Project.

The present study evaluates the technical, economical, financial and institutional feasibility of grid-connected photovoltaic power generation for the islands of Tokelau. It compares various ...

The Tokelau Renewable Energy Project was launched in 2010 and culminated in the installation of a photovoltaic-diesel hybrid system with battery storage on each of Tokelau's three atolls; ...

Hybrid Photovoltaic/Coconut based power systems in Tokelau - Consultancy for the Feasibility, Environmental Impact Assessment, System Design and Specifications of Major Components ...

RES: 1MW off-grid solar energy system across three main atolls of Tokelau. The project includes : 4032 solar modules, 196 string inverters, 112 DC charge controllers, 84 battery inverters and 1344 batteries in 48V banks.

The Tokelau Renewable Energy Project was launched in 2010 and culminated in the installation of a photovoltaic-diesel hybrid system with battery storage on each of Tokelau's three atolls; Fakaofu, Nukunonu and Atafu. The new solar power systems replaced the existing diesel systems and were designed to provide at least 90% of

The specific objective of this EIA is to provide the decision makers in Tokelau with an account of the environmental implications of the proposed PV project and identify, describe and ...

The Tokelau Renewable Energy Project, launched in 2010 and due to be completed in 2013, has seen the construction of a PV/diesel hybrid system on each atoll in the Pacific island nation of Tokelau. Previously, the atolls used diesel generator sets to provide electricity on a centralized distribution network.

Hybrid Photovoltaic/Coconut based power systems in Tokelau - Consultancy for the Feasibility, Environmental Impact Assessment, System Design and Specifications of Major Components and Financial Strategy

The present study evaluates the technical, economical, financial and institutional feasibility of grid-connected photovoltaic power generation for the islands of Tokelau. It compares various options and identifies a solution that shows the best Economic Rate of Return.

Solar Array's seen on the three tiny islands of Tokelau to completely produce solar power energy. The renewable energy system comprising of solar panels, storage batteries and generators running on biofuel derived from coconut will generate enough electricity to meet 150% of the islands" power demand.

In 2012, Tokelau took a major step towards energy independence by installing three large renewable energy systems capable of powering the atolls which comprise the nation politically; a step enabled by forward-thinking policies put in place by the government of Tokelau and the funding and support of the New Zealand Government.

Home > EU-GIZ ACSE Case Study Tokelau Solar Hybrid Mini Grids. Publication Year: 2 016. Language: English. Resource Type: Brochure/Factsheet. Case Study/Lessons Learned. Publisher: EU-GIZ ACSE. Documents. GIZ-ACSE_Case Study Tokelau_Solar Hybrid Mini Grids.pdf. Related Countries. Tokelau. Related Projects.
