

What is a smart grid?

The concept of a smart grid began to emerge in the early 2000s. Since then, many countries have been pursuing a smart grid. Each country has their own unique definition of a smart grid based on their own policies and objectives. Therefore, every country approaches achieving a smart grid a little different.

Are smart grids a key measure of grid resiliency in Japan?

Latest update: August 2022 -- Grid stability has traditionally been one of the top priorities in Japan, and smart grids are considered a key measure that can contribute to grid resiliency.

What is the JRC doing with smart grids?

The JRC also produced smart grids reports in the context of the Clean Energy Technology Observatory (CETO), targeting specific smart grid technologies (e.g. smart meters, power electronics for HVDC, etc).

Who will build a smart grid in Australia?

EnergyAustralia, announced as the lead utility in the federally sponsored consortium to study Smart Grid in Australia, will build the smart grid over five sites in New South Wales with partners IBM, Grid Net, a San Francisco-based energy software company, and GE Energy.

What is the SmartGrids European technology platform for electricity networks of the future?

The SmartGrids European Technology Platform for Electricity Networks of the Future began its work in 2005. Its aim is to formulate and promote a vision for the development of European electricity networks looking towards 2020 and beyond.

What makes a smart grid infrastructure a success?

Smarter grid infrastructure based on digital and interoperable solutions is essential to the success of the energy transition. The report analyses a range of enabling technologies: transmission innovation, grid-scale storage services, electric vehicles smart charging, advanced meter infrastructure and home energy management systems).

In the Aalborg 2015 Symposium on Microgrids research and demonstrations in progress in Europe, USA, China, Japan, Canada, Korea, Chile and developing countries were presented ...

Overview Europe Africa Asia Australia North America South America See also Development of smart grid technologies is part of the European Technology Platform (ETP) initiative and is called the SmartGrids Technology platform. The SmartGrids European Technology Platform for Electricity Networks of the Future began its work in 2005. Its aim is to formulate and promote a vision for the development of European electricity networks looking towards 2020 and beyond.
