The peak hours of solar irradiation are usually in hours of low electricity demand in the grid. Without energy storage technology, the solar power plant has to be operated at off-design conditions most of the time, which leads to the quite low thermal efficiency of the ORC and low overall system efficiency.

The technology adopted by solar power plant is, that is, when the solar radiance strikes the semiconductor (solar cell), a flow of electrons takes place through a load (closed loop), called as transformation of energy from solar to electrical (electric power). The energy produced in this procedure is in DC nature at low voltage (LV) level so it ...

Global energy demand soared because of the economy's recovery from the COVID-19 pandemic. By mitigating the adverse effects of solar energy uncertainties, solar thermal energy storage provides an opportunity to make the power plants economically competitive and reliable during operation.
