"A flow battery takes those solid-state charge-storage materials, dissolves them in electrolyte solutions, and then pumps the solutions through the electrodes," says Fikile Brushett, an associate professor of chemical engineering. That design offers many benefits and poses a few challenges.

Among all electrolytes, polymer-based solid-state electrolytes (SSEs) are the most promising candidates, as they demonstrate the most comprehensive properties. The advantages and disadvantages of commonly ...

Rechargeable batteries are widely regarded as an electrochemical energy storage method to mitigate fossil fuel pollution [1]. However, lithium-ion batteries (LIBs) have nearly reached their energy density limit (theoretically $\sim 390 \text{ Wh kg}^{-1}$) [2], making it challenging to meet the increasing demand for higher energy density in portable electronic devices and ...

Solid-state lithium batteries (SSLBs) utilize solid electrolytes (SEs) instead of their liquid counterpart, providing higher energy density and safety, and are considered as potential energy storage technology. Among the various kinds of SEs, the garnet ($\text{Li}_7\text{La}_3\text{Zr}_2\text{O}_{12}$, LLZO) solid electrolyte has considerable Li-ion conductivity and robust air/chemical stability, ...

In order to clearly understand the effect of solid electrolyte thickness on energy density, we summarized and simulated the practical energy density of all-solid-state lithium batteries in Fig. 1 [3, 31]. Four cathodes (LiCoO_2 , LiFePO_4 , $\text{LiNi}_{0.8}\text{Mn}_{0.1}\text{Co}_{0.1}\text{O}_2$ and S) coupling with Li anode were chosen for comparison.

To meet the urgent market requirement of high energy density and high safety for electrical vehicles and electronic devices, substituting nonflammable solid-state electrolytes (SSEs) for liquid electrolyte is regarded as the fundamental way [1], [2], [3]. Among all SSEs [4], [5], [6], garnet electrolyte is a promising candidate for next high-energy-density generation ...

Energy from renewable energy sources such as solar, wind and tidal, is becoming increasingly prevalent and crucial to mitigate the energy crisis and protect the environment [1], [2], [3], [4]. However, their intermittent nature can lead to fluctuations in energy supply, making it necessary to adopt large-scale energy storage systems. lithium-ion batteries (LIBs), currently ...
