

Solomon Islands pt green power group

What is the Solomon Islands energy project?

The project will support the Solomon Islands government to boost renewable energy generation and increase access to grid-supplied electricity, while reducing reliance on expensive, imported fossil fuels.

What is the Solomon power project?

The Project forms part of a broader initiative of Solomon Islands Electricity Authority (SIEA), trading as Solomon Power, the state-owned enterprise responsible for energy generation and distribution within the Solomon Islands. Solomon Power has recently started to invest in strengthening and expanding its system.

How will solar power benefit the Solomon Islands?

This will provide access of low-income households to electricity in Peri-urban and rural areas of Solomon Islands, and by increasing the generation capacity of renewable energy facilities (solar PV) in the Islands.

How much will a solar PV project cost in Solomon Islands?

Component 3: US\$ 2.5 million to add grid-connected solar power to contribute to the overall share of renewable energy in Solomon Islands energy mix. Solomon Power has identified three possible sites for grid-connected solar PV, not all of which are likely to be funded under the Project. These include:

What is the Solomon Islands Electricity Authority (SIEA)?

The Act sets out in very wide terms the functions and duties of the Solomon Islands Electricity Authority (SIEA). The SIEA (trading as Solomon Power) is generally in charge of all matters related to electricity production and transmission/distribution in Solomon Islands, including ensuring standards of safety, efficiency and economy.

Why is electricity a problem in the Solomon Islands?

Universal grid-connected electricity supply is a major challenge across the Solomon Islands. With a 45% electrification rate and a high dependency on diesel generators for power supply in the capital, the country has one of the highest electricity rates in the world (USD 0.82/kWh).

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.
