

Switchgear energy storage requirements

What are the customer requirements for a battery energy storage system?

Any customer obligations required for the battery energy storage system to be installed/operated such as maintaining an internet connection for remote monitoring of system performance or ensuring unobstructed access to the battery energy storage system for emergency situations. A copy of the product brochure/data sheet.

How should battery energy storage system specifications be based on technical specifications?

Battery energy storage system specifications should be based on technical specification as stated in the manufacturer documentation. Compare site energy generation (if applicable), and energy usage patterns to show the impact of the battery energy storage system on customer energy usage. The impact may include but is not limited to:

What is a typical voltage range for switchgear?

Switchgear systems are generally classified by voltage. Typical ranges of paralleling switchgear voltages are from 480V to 15kV and match the voltage ranges of the generators. Assemblies are also rated at specific voltages (i.e. 5kV, 15kV, 27kV, 38kV, etc.). Figure 1 illustrates the most common voltage ranges for switchgear.

What equipment do I need to install a battery energy storage system?

Any bollards required to be installed in front of battery energy storage system. Safety exclusion zone around battery energy storage system if required. Location of main switchboard. Any other existing NET on site.

What is a switchgear monitoring system?

For switchgear it provides a way for individuals to remotely monitor and/or control the switchgear with a computer. The system/group monitoring systems most commonly used are the Building Management System (BMS), Building Automation System (BAS), and Supervisory Control and Data Acquisition (SCADA).

How do I plan a battery energy storage system?

Conduct an analysis of the customer's current energy costs based on customer electricity bills. Depending on the purpose of the battery energy storage system, include a description of how the proposed battery energy storage system is expected to impact/change the customer energy usage and electricity costs.
