

Does Switzerland have a solar market in 2022?

From pv magazine Germany Swissolar, the PV association of Switzerland, has published provisional figures on solar market development in 2022. It said that the country installed more than 1 GW of PV last year for the first time.

Who surveys the solar market in Switzerland?

The Swiss Federal Office of Energy has been surveying the solar market in Switzerland for more than 20 years. Due to this long experience the quality of the data has been maintained, thanks as well to all the installers and distributors who are willing to complete the annual questionnaire.

How much solar energy does Switzerland generate?

In 2022, Switzerland derived 6% of its electricity from solar power. Studies show that installing solar panels on mountaintops in the Swiss Alps could produce at least 16 terawatt-hours (TWh) a year, approaching half of the nation's 2050 solar energy target.

How many GW of solar power did Switzerland install last year?

It said that the country installed more than 1 GW of PV last year for the first time. The statistics confirm what was reported by SolarPower Europe in its "Global Market Outlook" report, which was released at the recent Intersolar trade show in Munich, Germany. By comparison, Switzerland deployed around 683 MW of PV in 2021.

Why are solar panels becoming more popular in Switzerland?

The solar photovoltaic (PV) based solar panels represent the largest segment of the Swiss solar energy market due to the increasing commercial and residential installations of solar modules. The Swiss government announced in 2019 that it would achieve net-zero greenhouse gas emissions by 2050.

Is Switzerland a good country to install solar panels in 2022?

Switzerland had its best year in terms of new PV deployment in 2022, with more than 1,000 MW of installed capacity, according to provisional statistics from Swissolar. At the end of December, the nation surpassed 4.6 GW of cumulative installed solar capacity. From pv magazine Germany
