

What type of energy is used in Syria?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Syria: How much of the country's energy comes from nuclear power?

What happened in Syria?

Syrian security forces and government-affiliated militias continued to arbitrarily detain, disappear, and mistreat people across the country. Authorities also continued to unlawfully confiscate property and restrict access to areas of origin for returning Syrians.

What challenges does Syria face?

But it faces another significant, often overlooked challenge: the growing threat of climate change. Syria Humanitarian Needs Overview for 2023 notes that the country's geographical location in the eastern Mediterranean basin has made it vulnerable to climate variability and climate change-related impacts in recent decades.

Which countries are supporting Syria's warring factions?

Russia, Turkey, the United States, and Iran continued to provide military and financial support to warring factions. Israel has conducted aerial strikes in Syria, including on military targets of the Syrian government's allies Iran and Hezbollah, the Lebanese Shiite political party and armed group.

Are Syrians suffering a 'humanitarian stress'?

The United Nations estimated that, for the first time since the start of the conflict, Syrians in every sub-district of the country experienced some degree of "humanitarian stress." Although conditions remain unsafe, refugee-hosting countries Turkey and Lebanon unlawfully deported thousands of Syrians back to Syria.

Is biomass a source of electricity in Syria?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Syria: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.
