

MVRDV reveals a first look at its 'sun rock' project in taiwan,an environmentally conscious and design-minded power supply building. the monolithic,solar panel -clad structure functions as an operations facility and contains offices,a maintenance workshop,storage spaces,and a public gallery for taiwan's government-owned power company taipower.

"The site for Taipower's new facility receives a significant amount of solar exposure throughout the year, and so the rounded shape of Sun Rock is designed to maximize how much of that sunlight can be harnessed for energy," said MVRDV in a New Atlas report.

Designed by architecture firm MVRDV, Sun Rock is an innovative power supply building that's commissioned to prepare Taiwan for a shift to greener energy. It will be primarily used by Taipower, the government-owned power company, as a new operational facility in Changhua Coastal Industrial Park near Taichung.

A high-profile Dutch firm has launched an urban sustainability project of epic proportions. Called the Sun Rock project, MVRDV has announced plans to build a building almost totally smothered in solar panels, capable of generating roughly 1 million kWh of green energy, every year, according to a new page on the company's official website.

This breakthrough in the power sector does not just benefit the bottom line of companies but also plays a crucial role in curbing carbon emissions and helps save our environment. We are providing customised on-site and off-site solar energy solutions to Commercial and Industrial power consumers in India.
