

Today, renewable energy sources make up a significant proportion of the electricity mix that powers our homes and businesses. And the UK is well on its way to creating an electricity system that's wholly based on renewable and ...

In 2022, the United Kingdom's total energy supply (TES) was primarily composed of natural gas, contributing 39.4%, followed by oil at 34.8%, nuclear power at 8.1%, and coal at 3.2%. Biofuels and waste contributed 8.9%, while other ...

The United Kingdom has been an early player in the energy transition, being among the first countries to set a net zero target by 2050 and to put in place carbon budgets. UK emissions have already fallen by around 50% since 1990, indicating a strong start.

What targets and policies are there for renewable energy in the UK? The Government published its Net Zero Strategy in 2021, which sets out how it will meet the target legislated in 2019 of reaching net zero greenhouse gas emissions by 2050. The Strategy includes the ambition for the UK to be powered entirely by "clean electricity" (which ...

United Kingdom: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.
