How much wind power can the United States generate a year?

According to the National Renewable Energy Laboratory, the contiguous United States has the potential for 10,459 GW of onshore wind power. The capacity could generate 37 petawatt-hours (PW<sup>h</sup>) annually, an amount nine times larger than total U.S. electricity consumption.

Where are wind turbines made?

Their manufacturing facilities are spread across 40 states, employing workers from the Southeast to the Steel Belt, to the Great Plains and on to the Pacific Northwest. The U.S. Department of Energy (DOE) is working with six leading wind turbine manufacturers towards achieving 20% wind power in the United States by 2030.

How many wind turbines are there in the United States?

Key findings from the report include: Cumulative U.S. distributed wind capacity stands at 1,110 MW from more than 92,000 wind turbines across all 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, the Northern Mariana Islands, and Guam.

How much offshore wind power does the US have?

In addition to the large onshore wind resources, the U.S. has large offshore wind power potential, with another NREL report released in September 2010 showing that the U.S. has 4,150 GW of potential offshore wind power nameplate capacity, an amount 4 times that of the country's 2008 installed capacity from all sources, of 1,010 GW.

Who buys wind power?

Direct retail purchasers of wind—including corporate commitments—buy electricity from at least 48% of the new wind capacity installed in 2023. Wind turbines continue to grow in size and power, contributing to competitive costs and prices.

Which Texas town has the largest battery storage on a wind farm?

A west Texas town recently became home to the largest battery storage on a wind farm, thanks to investments from the Energy Department. Often described as "giant batteries," pumped storage hydropower (PSH) plants account for the bulk of utility-scale electrical energy storage in the United States and worldwide.

California, Texas and Florida saw the most solar power and battery storage growth from 2013 to 2022, while Texas, Iowa and Oklahoma topped the charts for wind power growth. Illinois, New Jersey and Michigan were the states with the biggest increases in savings from electric energy efficiency programs from 2013 to 2021.
