Princeton is phasing out steam generation for heating and instead implementing a new low-temperature heating water energy system driven by electric heat pumps, thermal storage and geo-exchange, which captures heat from inside campus buildings in the summer and stores that energy in the ground until it is needed again in the winter.

The primary advantage that mobile energy storage offers over stationary energy storage is flexibility. MESSs can be re-located to respond to changing grid conditions, serving different applications as the needs of the power system evolve. For example, during normal operation, a MESS could support an overloaded substation in the summer
